

NEOGEN Genomics

NEOGEN offers genomic services worldwide which deliver innovative DNA testing for the discovery and commercial application of genomic advances which enhances the safety and abundance of life. DNA testing services are provided for food, animals, aquaculture, agronomy, forestry, horticulture and human, as well as supporting the research institutions, breed associations and breeding companies serving these industries.

State-of-the-art genomics and bioinformatics, plus our work with leading scientists drive NEOGEN's world leadership in DNA testing for food production, animal well-being and research.

Located in Lincoln, Nebraska, and with labs in six other countries, NEOGEN Genomics (formerly Neogen GeneSeek Operations) is the world's largest genotyping lab. NEOGEN provides genetic solutions for a wide array of industries as diverse as beef cattle, dairy, swine, poultry, companion animal, plant, aquaculture and much more.
