

Zangger Popcorn Hybrids

ZPH works tirelessly to develop new varieties each year in Nebraska and winter nurseries in order to achieve genetic gain. We work hands on with our customers in order to develop strong working relationships resulting in the best possible product. Through this effort we hope to accomplish the best possible yield for growers and quality for processors. All ZPH products are non-GMO and tested through AOSA, OECD and ISTA standards.

The Zangger family has been originating, selecting, developing, testing producing hybrid popcorn seed since the early 1980s. We are a family owned corporation and have an excellent team of employees who strive for quality and efficiency when processing your order.

We are located in the North Loup Valley in Central Nebraska, an area with a rich heritage of growing popcorn. Central and western Nebraska continues to be one of the largest producers of popcorn in the world. Our high elevation, use of irrigation, and cool August nights allow us to produce hybrids that are high in adaptability, quality, and yield. Our hybrids are among the most competitive seed options on the market today.
