

Working Together to Protect Sensitive Specialty Crops

Farmers and other pesticide applicators can reduce potential damage to sensitive specialty crops and pollinators by communicating with one another throughout the planting and growing season.

DriftWatch™ and **BeeCheck™** are online mapping services from FieldWatch that allow those with commercial specialty crops, organic crops and beehives to report their field locations. It's voluntary, free, easy to use, accurate and secure. Pesticide applicators can review the website to see where specialty crops are located. Included in the registry are commercial apiary sites, vineyards, orchards, fruit and vegetable grow sites, nursery and Christmas tree production sites and certified organic crops.

466 growers registered in Nebraska.

1,151 specialty crops sites on DriftWatch™ and BeeCheck™.

74 of 93 counties represented, with more sites added frequently!
